# Utkarsh Singh

Product Designer & Product Manager

+91-9560315061 · singh.utkarsh.aps@gmail.com · LinkedIN · My website · Bangalore, India

## SUMMARY

7 years in product design, the last year also running the PM side. Roadmaps, PRDs, discovery, most of my work has been in B2B SaaS: loyalty platforms, enterprise dashboards, FinTech. I've shipped products and built design systems that outlasted me on projects. I care about the work being right, not just looking right. This usually means spending more time on research and less time polishing pixels that nobody will notice. Lately I've been deep in AI tooling, both building it into how my team works and designing experiences around it.

## EXPERIENCE

### **Product Designer II** · Capillary Technologies · Bangalore · May 2022 - Present

*B2B loyalty and engagement SaaS platform serving 250+ enterprise brands across 30+ countries.*

- **Rewards Marketplace** Took this from a blank file to a shipped product. Ran discovery, prioritised the backlog using RICE scoring, and drove it through multiple engineering sprints. It's now one of the most used platform across enterprise clients.
- **Track Record** Designed 50+ features across 6 B2B products over 3.5 years. NPS stayed above 30 throughout, which in enterprise SaaS is harder than it sounds, given these products get scrutinised by procurement teams and power users in the same breath.
- **Design System** Built a Figma component library out of frustration every product was solving the same UI problems in different ways. Grew it to 70+ components with tokens and auto-layout patterns, adopted by all 4 engineering squads. Design-to-dev handoff time dropped by roughly 30%.
- **AI Workflow** Brought V0, Figma Make, Lovable and Claude into the team's prototyping process. What used to take 3-5 days to build into something testable now takes a few hours. The team tests more ideas and guesses on fewer of them.
- **Research Synthesis** Used Claude and ChatGPT to process findings from 40+ enterprise client interviews. Not to skip the thinking, but to surface patterns faster. Synthesis that used to take 2 days now takes a morning.
- **Hackathon** Won the company-wide hackathon by prototyping an AI automation for Milestone setup. The task that was eating 4+ hours of manual config work. The prototype was good enough to land on the actual product roadmap.
- **Product Discovery** Ran JTBD interviews and moderated usability sessions for 3 major feature areas. Wrote the PRDs, defined acceptance criteria, and ran sprint planning with engineering and other PMs.
- **Accessibility** Made WCAG 2.1 AA compliance part of the design system itself rather than a QA afterthought. Contrast checks, focus states, and screen reader annotations baked into component specs.
- **Stakeholder Comms** Presented product direction to C-suite and enterprise clients regularly. Usually not a formal deck, more often a walkthrough of decisions and the reasoning behind them.
- Rockstar of the Quarter, three times. Each one came after a particularly hard quarter.

### **UI & UX Designer** · Sparklin · New Delhi · March 2021 - February 2022

*Client-facing design agency. Primary engagement: ICICI Bank digital platform redesign for 10M+ users.*

- **Platform Redesign** Led the full UX overhaul of ICICI Bank's digital banking product across desktop, mobile, and tablet. It was not just a visual refresh, but a rethink of the information architecture and core transaction flows.
- **User Research** Ran 40+ moderated usability sessions and card sorting before touching the visual design. The navigation structure came almost entirely from what users showed us, not from what stakeholders initially asked for.
- **Outcomes** Task completion rate went up 40% and support tickets dropped 25% post-launch, tracked by the client's internal analytics team.
- **Handoff** Delivered 200+ annotated screens with responsive specs. The engineering team came back for a second engagement specifically because the handoff was clean.

### **Visual Designer** · Sparklin · New Delhi · February 2020 - March 2021

*Designed Android app experience for Chaayos - India's leading chai café chain with 100+ locations.*

- **App Design** Owned the full mobile design, user flows, wireframes, and final UI for Android. The app hit 4.5+ on the App Store after launch.
- **UX Problem** There was a high drop-off at the customisation step in the ordering flow. Dug into session recordings, restructured the step sequence, and got order completion time down by around 30%.

### **Graphic Designer** · 7 Kreinto · Noida · June 2019 - February 2020

- Designed pitch decks and brand material contributing to 15+ client wins. Worked directly with the CEO on positioning and strategic communications. This was useful in early training in making a case visually and verbally.

## EDUCATION & CERTIFICATIONS

### **Indian Institute of Technology (IIT), Delhi** · Nov 2024 - May 2025

Certification in Design Thinking & Innovation · Scored 86.5% - 1st Distinction

### **Interaction Design Foundation (IxDF)** 2023

Design for the 21st Century with Don Norman · Human-Centred Design & Systems Thinking

### **Chaudhary Charan Singh University** 2014 - 2017

Bachelor of Computer Applications (BCA)

## SKILLS & TOOLS

**Design** Figma, Figma Make, Adobe Photoshop, Adobe Illustrator

**AI & Prototyping** Claude, Figma Make, ChatGPT, V0, Lovable.

**Product & Collaboration** Jira, Slack, Notion, Confluence · PRD writing, sprint planning, backlog grooming

**Research** JTBD interviews, moderated usability testing, card sorting, tree testing, A/B testing, affinity mapping

**Domains** B2B SaaS · Loyalty & Rewards · FinTech · Mobile (Android) · Enterprise UX · Design Systems · Accessibility (WCAG 2.1)

## A FEW OTHER THINGS

- **Hackathon** Won the company-wide Annual Hackathon at Capillary, prototyped an AI automation that cut a 4-hour manual process down to about 20 minutes.
- **Recognition** Rockstar of the Quarter, 3 times at Capillary (Q4 2023, Q2 2025, Q1 2026).
- **IIT Delhi** Scored 86.5% in the Design Thinking & Innovation certification. First distinction out of the batch.
- **Internal Talk** Spoke at an internal Capillary design review on AI-assisted research workflows. A few practices from that session are now standard on the team.
